

1960  
Census  
of  
Population

ADVANCE REPORTS  
GENERAL SOCIAL AND ECONOMIC  
CHARACTERISTICS

April 27, 1962

PC(A3)-1

United States

(This series consists of 52 reports—one each for the United States, 50 States, and the District of Columbia—which are numbered in alphabetical order rather than in the order of publication)

This report presents statistics from the 1960 Census of Population on social and economic characteristics of the inhabitants of the United States. The data presented here are being issued in advance of their publication in the Final Report PC(1)-1C, which will provide far more additional information on the same characteristics of the population as well as definitions of terms and explanations of collection and processing procedures. The final report will be published within about two months.

The statistics in this advance report are presented in the form of preprints of three tables (100, 105, and 106) from the final report. Distributions by social and economic characteristics are shown in table 100 for the United States by type of residence (central cities of urbanized areas, urban fringes, urban places of 10,000 or more outside urbanized areas, the remaining urban places, and rural-nonfarm and rural-farm areas). Tables 105 and 106 present summary statistics on nativity, parentage, migration, education, families, fertility, employment status, occupation, industry, and income, by regions, divisions, and States.

All of the data in this advance report, and in the final report on which it is based, were tabulated from a 25-percent sample of the population, consisting of one household out of

every four (and of one person out of every four persons not in households). Since the statistics shown here are based on a sample, they are subject to sampling variability, as will be fully explained in the final report. There may be differences between comparable distributions in this report and in other reports of the 1960 Census of Population because of sampling variability or errors in processing.

Of the 179.3 million persons in the United States in 1960, 58.0 million, or about one-third of the total, lived in central cities of urbanized areas. Each urbanized area consists of at least one central city of 50,000 or more and the thickly built-up surrounding area. Another one-third lived in the urban fringe of these areas and in smaller urban places, and the remaining 30 percent were classified as either rural-nonfarm or rural-farm persons. About one-fourth of the rural population lived on farms, and the other three-fourths lived in villages or in the open country but not on farms.

The rural-farm population according to the 1960 Census is somewhat lower than that obtained from the Current Population Survey for April 1960. Among the reasons for this discrepancy are the fact that the figures from both sources are subject to sampling variability and that the Current Population Survey

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, Secretary  
BUREAU OF THE CENSUS, Richard M. Scammon, Director

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, \$4.

NOTE: With the publication of this report, all 52 reports in the PC(A3) Series have been published.

data are for the territory classified as rural in the 1950 Census rather than in the 1960 Census. Furthermore, the enumerators in the Current Population Survey differed from those in the Census with respect to training and experience.

Of the 9.7 million foreign-born persons in 1960, over one-half (52 percent) lived in central cities of urbanized areas. Foreign-born persons accounted for 8 percent of the population in urbanized areas, but only 3 percent of the remaining urban population. Among persons of foreign stock in central cities, persons of Italian birth or parentage were most numerous. However, in rural areas, persons of German foreign stock were most numerous.

Three out of every four persons in the native population of the United States in 1960 were still living in the State in which they were born. Almost one-third of the residents in the urban fringe portions of urbanized areas were born in a State different from the one in which they were enumerated in 1960. By contrast, only one-fifth of the rural population had moved to another State. About 42 percent of the urban fringe residents lived in a different county in 1955 from their county of residence in 1960. The corresponding figure for central city residents was only 29 percent.

Nearly 46 million Americans moved, at least from one house to another, between January 1959 and April 1960. Only 26 percent of the population in 1960 had lived in the same house 10 years or more. The population in the urban fringe was the most mobile, with only 21 percent having lived in the same house for 10 years or more, and the rural-farm population was the least mobile, with 47 percent having lived this long in the same house. Fifteen percent of the farm population had lived their entire lives in the same house.

There were nearly 44 million persons 5 to 34 years old who were enrolled in regular public and private schools and colleges at the time of the 1960 Census. About 3 million of these persons were enrolled in colleges and universities. More than 97 percent of the children at ages 7 to 13 were enrolled in school; 94 percent of those 14 and 15 years old and 81 percent of those 16 and 17 years old were likewise in school. There was little variation in enrollment rates by type of residence for persons under 18 years old, but for

persons 18 and 19 years old--when many youths are entering the labor force--the percent enrolled varied from a high of 54 percent in places of 10,000 or more outside urbanized areas to only 34 percent for the rural-nonfarm population.

For persons 25 years old and over, the median number of school years completed was 10.6. About one-half of the urban fringe residents had completed a high school education, but only about one-third of the rural population had been through high school. Of the 7.6 million Americans 25 years old and over in 1960 who had completed college, 30 percent lived in the urban fringe, although only 21 percent of the total population lived in this fringe. (An additional one-half million college graduates are under 25 years old, but are not shown in the accompanying tables.)

All but 2 percent of the married couples in 1960 maintained their own household. About one out of every three married couples had one or more children under 6 years of age living at home. Fifty-nine percent of the couples had children under 18, with the proportion being higher in the urban fringe and lower in the central cities of the urbanized areas.

About 87 percent of the 64 million children under 18 years of age in the United States in 1960 lived with both of their parents. The remaining 13 percent lived with only one parent, with other relatives only, or apart from relatives in an institution or other living quarters. The proportion of children living with both parents was only 83 percent in central cities, but 91 percent in the urban fringe and 90 percent in the rural-farm population.

The average number of children ever born per 1,000 women 35 to 44 years old who had ever married was 2,627. The rate of children ever born for ever-married women in this age group was 2,346 for women in central cities of urbanized areas, and the rate was 3,467 for those on rural farms.

About 77 percent of all males 14 years old and over in 1960 were in the labor force. The rate of participation in the labor force varies considerably by age; about 57 percent of the men 14 to 24 years old were in the labor force (most of the remaining 43 percent being enrolled in school); 93 percent of the men from 25 to 64 years old were in the labor

force, and only 31 percent of those 65 years old and over. Men in the Armed Forces accounted for 1.7 million, or 4 percent, of the total male labor force. The levels of the labor force statistics in this and following paragraphs differ somewhat from the levels shown in the Current Population Survey reports issued monthly by the Bureau of Labor Statistics. Reasons for the minor differences are given in the report PG(S1)-17.

In 1960 there were 22.4 million women in the labor force. This figure corresponds to a labor force participation rate of 35 percent for women 14 years old and over. The participation rate was highest (40 percent) for women in central cities of urbanized areas, and lowest (23 percent) for rural-farm women. According to the 1960 Census, 5 percent of the civilian labor force was unemployed in 1960 and about two-thirds of the 3.5 million unemployed persons were men. There was some contrast within urbanized areas; for men, the unemployment rate was 6 percent in central cities but only 4 percent in the urban fringe.

The labor force participation rate for married women living with their husbands was about 31 percent in 1960 and only slightly lower than the rate for all women 14 years old and over. Twenty-one percent of the married women, husband present, with own children under 6 who resided in a central city were in the labor force, as compared with a rate of only 16 percent for their counterparts living in the urban fringe.

Slightly more than one-half (57 percent) of all employed persons were living in the 213 urbanized areas in 1960. Sixty-four percent of all professional, technical, and kindred workers lived in these areas; 60 percent of the managers, officials, and proprietors (except farm); 63 percent of all sales workers; and 70 percent of the clerical and kindred workers. However, only 51 percent of the laborers lived in urbanized areas. Farmers, farm managers, and farm laborers were, of course, concentrated in the rural population. Even so, only six out of ten employed persons classified as rural-farm residents were engaged in agriculture, forestry, or fisheries. About

12 percent were employed in durable and nondurable goods manufacturing, nearly 7 percent in wholesale and retail trade, and about 7 percent in public administration and professional and related services combined.

About 14 percent of all workers were working outside their county of residence. Two out of ten workers among urban fringe residents crossed county lines to get to work, as compared with only one out of ten central city residents. Among workers who lived outside urbanized areas, rural-nonfarm residents were most likely to work outside their county of residence (17 percent), and workers living in urban places of 10,000 or more were least likely to travel across county lines to work (8 percent).

Almost two out of every three workers traveled to work by private automobile or car pool. Again, the major contrast was between those in central cities and those in the urban fringes; only 55 percent of the central city residents went to work by car, but 74 percent of the workers living in the urban fringe. Almost 17 percent of the workers living in places of 2,500 to 10,000 inhabitants walked to work, as compared with only 10 percent nationally. One-half of the rural-farm workers were reported as persons who worked at home.

The average (median) family income in 1959, as reported in April 1960, was \$5,700. About 15 percent of the 45 million families had incomes of \$10,000 and over. At the other extreme, somewhat more than one in every five families reported less than \$3,000 in money income in 1959.

Family income varied by size of place, with families in the urban fringe having the highest median income, just over \$7,000. Although the median family income in central cities was somewhat lower (\$5,900), it was still higher than that for any size of place outside urbanized areas. The average income of families and unrelated individuals taken together was \$4,700 for the total United States, \$5,200 for the urban population, and about \$3,700 for the rural population.

Table 100.—SOCIAL AND ECONOMIC CHARACTERISTICS OF THE POPULATION, FOR THE UNITED STATES, BY SIZE OF PLACE: 1960  
(See text for source of data)

Census  
of  
Population

ADVANCE REPORTS

GENERAL SOCIAL AND ECONOMIC  
CHARACTERISTICS

November 6, 1961

PC(A3)-2

Alabama

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in the order of publication)

This report presents statistics from the 1960 Census of Population on social and economic characteristics of the inhabitants of the State and of selected subdivisions of the State. The data presented here are being issued in advance of their publication in the Final Report PC(1)-2C, which will provide additional information on the same characteristics of the population for this State, as well as definitions of terms and explanations of collection and processing procedures. The final report will be published within the next month or two.

The statistics in this advance report are presented in the form of preprints of three tables (32, 33, and 70) from the final report. Tables 32 and 33 present summary statistics on nativity, parentage, migration, education, families, employment status, occupation, industry, and income for persons in each of the standard metropolitan statistical areas, urbanized areas, and urban places of 10,000 or more in the State. Distributions by social and economic characteristics are shown in

table 70 for the State by type of residence (central cities of urbanized areas, urban fringes, urban places of 10,000 or more outside urbanized areas, the remaining urban places, and rural areas).

All of the data in this advance report, and in the final report on which it is based, were tabulated from a 25-percent sample of the population, consisting of one household out of every four (and of one person out of every four persons not in households). Since the statistics shown here are based on a sample, they are subject to sampling variability, as will be explained in the final report. There may be differences between comparable distributions in this report and in other reports of the 1960 Census of Population because of sampling variability or errors in processing.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

# ADVANCE REPORTS

## GENERAL SOCIAL AND ECONOMIC CHARACTERISTICS

October 4, 1961

PC(A3)-3

### Alaska

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in the order of publication)

This report presents statistics from the 1960 Census of Population on social and economic characteristics of the inhabitants of the State and of selected subdivisions of the State. The data presented here are being issued in advance of their publication in the Final Report PC(1)-3C, which will provide additional information on the same characteristics of the population for this State, as well as definitions of terms and explanations of collection and processing procedures. The final report will be published within the next month or two.

The statistics in this advance report are presented in the form of preprints of three tables (32, 33, and 70) from the final report. Tables 32 and 33 present summary statistics on nativity, parentage, migration, education, families, employment status, occupation, industry, and income for persons in each of the standard metropolitan statistical areas, urbanized areas, and urban places of 10,000 or more in the State. Distributions by social and economic characteristics are shown in

table 70 for the State by type of residence (central cities of urbanized areas, urban fringes, urban places of 10,000 or more outside urbanized areas, the remaining urban places, and rural areas).

All of the data in this advance report, and in the final report on which it is based, were tabulated from a 25-percent sample of the population, consisting of one household out of every four (and of one person out of every four persons not in households). Since the statistics shown here are based on a sample, they are subject to sampling variability, as will be explained in the final report. There may be differences between comparable distributions in this report and in other reports of the 1960 Census of Population because of sampling variability or errors in processing.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

ADVANCE REPORTS  
GENERAL SOCIAL AND ECONOMIC  
CHARACTERISTICS

October 2, 1961

PC(A3)-4

Arizona

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in the order of publication)

This report presents statistics from the 1960 Census of Population on social and economic characteristics of the inhabitants of the State and of selected subdivisions of the State. The data presented here are being issued in advance of their publication in the Final Report PC(1)-4C, which will provide additional information on the same characteristics of the population for this State, as well as definitions of terms and explanations of collection and processing procedures. The final report will be published within the next month or two.

The statistics in this advance report are presented in the form of preprints of three tables (32, 33, and 70) from the final report. Tables 32 and 33 present summary statistics on nativity, parentage, migration, education, families, employment status, occupation, industry, and income for persons in each of the standard metropolitan statistical areas, urbanized areas, and urban places of 10,000 or more in the State. Distributions by social and economic characteristics are shown in

table 70 for the State by type of residence (central cities of urbanized areas, urban fringes, urban places of 10,000 or more outside urbanized areas, the remaining urban places, and rural areas).

All of the data in this advance report, and in the final report on which it is based, were tabulated from a 25-percent sample of the population, consisting of one household out of every four (and of one person out of every four persons not in households). Since the statistics shown here are based on a sample, they are subject to sampling variability, as will be explained in the final report. There may be differences between comparable distributions in this report and in other reports of the 1960 Census of Population because of sampling variability or errors in processing.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.

ADVANCE REPORTS  
GENERAL SOCIAL AND ECONOMIC  
CHARACTERISTICS

January 11, 1962

PC(A3)-5

Arkansas

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in the order of publication)

This report presents statistics from the 1960 Census of Population on social and economic characteristics of the inhabitants of the State and of selected subdivisions of the State. The data presented here are being issued in advance of their publication in the Final Report PC(1)-5C, which will provide additional information on the same characteristics of the population for this State, as well as definitions of terms and explanations of collection and processing procedures. The final report will be published within the next month or two.

The statistics in this advance report are presented in the form of preprints of three tables (32, 33, and 70) from the final report. Tables 32 and 33 present summary statistics on nativity, parentage, migration, education, families, employment status, occupation, industry, and income for persons in each of the standard metropolitan statistical areas, urbanized areas, and urban places of 10,000 or more in the State. Distributions by social and economic characteristics are shown in

table 70 for the State by type of residence (central cities of urbanized areas, urban fringes, urban places of 10,000 or more outside urbanized areas, the remaining urban places, and rural areas).

All of the data in this advance report, and in the final report on which it is based, were tabulated from a 25-percent sample of the population, consisting of one household out of every four (and of one person out of every four persons not in households). Since the statistics shown here are based on a sample, they are subject to sampling variability, as will be explained in the final report. There may be differences between comparable distributions in this report and in other reports of the 1960 Census of Population because of sampling variability or errors in processing.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any U.S. Department of Commerce Field Office.
